## Bacteria Freezing Protocol

1. Add water to glycerol 87% to reach to the concentration of 60-80%.
2. Sterile it by autoclaving.
3. Mix glycerol and bacteria culture medium 1:1 (Volume: Volume).
4. Move to -70 freezer immediately.

To prepare a fresh culture, scratch a little of the freezed bacteria and pour to LB broth medium. And again move to the freezer rapidly. Don't let to defreeze.
